The natural composition guarantees the safety of the product for health. Kartalin cream does not cause atrophic changes in the epidermis and dependence.

The effectiveness of Kartalin is clinically proven. In numerous studies, the toxicity of the cream was not found, so the use of the product does not cause intoxication of the body.

Kartalin is indicated for use in the following cases:

- various forms of psoriasis;
- some types of neurodermatitis;
- eczema;
- allergic dermatitis.

Instruction of use

The cream is applied to the affected areas of the skin in an even layer (without rubbing) 1 or 2 times a day, for at least 12 hours. The effect is observed after 1-2 weeks. Duration of application is from 2 to 4 months.

With extensive skin lesions, the application should be started gradually, first from the areas on the legs, after 3 days, apply the cream to the areas on the hands, after another 3 days, apply to all affected areas.

Precautions

Cream shouldn't be used in case of Individual intolerance (including anamnesis of hypersensitivity) components of Kartalin.

Cream should not be used on children under 3 years old. No test were performed
